

## **Canisius College receives research grant . . .**

Canisius College has been awarded a \$7,925 grant by Research Corporation, New York City, for a chemistry research project.

Rev. Paul J. McCarthy, S.J., professor of chemistry at Canisius, and Dr. Robert D. Bereman, assistant professor of chemistry at State University at Buffalo, will be the principal investigators under the grant.

The funds will be used toward the purchase of a closed cycle cryogenic refrigerator for investigation into energy levels of various molecules. Under the terms of the proposal accepted by Research Corporation, the scientists will investigate polarized optical and electron spin resonance spectra of low-symmetry molecules.

The award was made under the Research Corporation's Cottrell College Science Grants, which support academic research programs in the natural sciences at private, predominantly undergraduate institutions.
