

**DO YOU HAVE AN AREA I REQUIREMENT
IN SCIENCE REMAINING?**

**DO YOU HAVE SCHEDULING PROBLEMS
IN THE DAY DIVISION?**

Consider Ch 104, **Chemistry, Technology and Society**, offered one night a week on Wednesday, 6:00-8:45 P.M.

Course Description:

We live in a world strongly influenced by sciences, and especially chemistry, a world generally made more convenient and comfortable by today's industrial technologies. However, this has been achieved at the expense of a substantial intrusion into our natural environment. This course involves the study of chemistry in the context of the natural world by considering industrial activities as they relate to the chemistry of the environment.

Topics covered: Water Quality, Agricultural Chemicals, Pesticides, Air Quality, Dimensions of the Energy Crisis, Energy Alternatives, Polymers-plastics and food additives.

No prerequisites. No laboratory. Two sections are also offered in the Day Division.
