

# Students To Lecture

---

The Chemistry Club is continuing this year its policy of having groups of its members prepare and deliver lectures at various times through the year. Next Wednesday, a lecture with demonstrations will be given by William L. Tefft, Richard J. Herdlein and John F. Nelson on, "The Chemist and Food Adulterants." They will explain and demonstrate how to detect artificial coloring in alcoholic beverages, how to detect watered milk, and other such adulterants.

## Have Field Trips

In addition, the members of the club and their friends are given opportunity to see chemistry in industrial operation through field trips organized by both the Strohaver and the Chemistry Clubs.
